# INSTALLATION

## NOTICE:

Blackmer truck pumps **MUST** only be installed in systems which have been designed by qualified engineering personnel. The system **MUST** conform to all applicable local and national regulations and safety standards.

These instructions are intended to assist in the installation of Blackmer T-Type strainers, and **MUST** be kept with the pump.

Blackmer truck pump service shall be performed by qualified technicians **ONLY**. Service shall conform to all applicable local and national regulations and safety standards.

Thoroughly review the pump manual, all instructions and hazard warnings, **BEFORE** performing any work on Blackmer truck pumps.

Maintain **ALL** system and Blackmer truck pump operation and hazard warning decals.

## STRAINER MOUNTING

Blackmer T-Type strainers are designed for direct mounting on Blackmer truck pumps, or as line strainers for use with Blackmer truck pumps or other makes of pumps. T-Type strainers are available in 2, 2.5 and 3-inch sizes.

For direct mounting on Blackmer 2, 2.5 and 3-inch truck pump models, the strainer takes the place of the intake pipe flange and bolts directly to the INTAKE port of the pump. To mount the strainer directly on the Blackmer pump, use four (4) strainer capscrews (Ref. No. 44) and flange gasket (Ref. No. 43A). See Figure 1.

When using the Blackmer T-Type strainer as a line strainer, 2, 2 1/2 and 3-inch NPT tapped pipe flanges are available to adapt the strainer for use in the intake line. To mount the strainer in the intake line, use the strainer body flange (Ref. No. 42), flange gasket (Ref. No. 43A), and four (4) mounting bolts and nuts (44D & 44E). See Figure 2.

Failure to set the vehicle emergency brake and chock wheels before performing service can cause severe personal injury or property damage.

Failure to relieve system pressure prior to performing pump service or maintenance can cause personal injury or property damage.
