TRANSFER SOLUTION FOR CHEMICAL & INDUSTRIAL APPLICATIONS

G-FLO Series Eccentric Disc Pump

Seal-Less Eccentric Disc Transfer Solution for Chemical & Industrial Applications Requiring High Flow Rates

Mouvex® G-FLO Series Seal-Less Eccentric Disc Pumps are designed to provide premium performance and the ultimate in full containment and safety in chemical-processing and industrial applications, delivering high suction vacuum and high discharge pressure that allow it to self-prime and fully maximize product containment. G-FLO Series pumps are ideally suited for the safe transfer of critical high-value fluids.

CHEMICAL PROCESS

Applications:

Suitable for most chemical and industrial transfer applications, in particular those that require consistent non-pulsing flow and gentle fluid handling (low shear rates), such as:

- Polymer emulsions
- Isocyanates
- Polyols
- Alcohol
- Acid
- Additives
- Solvents
- Glues: Starch, latex, etc.
- Paint & coatings: Paints, inks, resins, etc.
- Methacrylate
- Soda
- Ether
- Detergents

Seal-less Design

The unique seal-less design features a multi-layer bellows in stainless steel that ensures durability, safety and product containment. The G-FLO Series provides high suction vacuum and high discharge pressure, which allows it to self-prime and fully strip lines, maximizing product recovery.

Run Dry Capability

The G-FLO Series can run dry for up to five minutes, and the self-compensating eccentric disc principle provides consistent flow rates over a long period of time. The flow rate is extremely accurate even at low speeds.

Dependable

Fewer moving parts results in reduced maintenance and downtime.

Operation

- **Principle:** Eccentric disc, positive displacement
- **Installation:** Can be base mounted

Construction

- All stainless steel construction
- Shaft sealed by multi-layer bellows in stainless steel
- O-ring seals in FKM, encapsulated FEP, or EPDM

Advantages

- Provides consistent and efficient flow with a wide range of viscosities independent of pressure
- Extremely gentle, pulse-free flow to protect shear-sensitive products
- Reduced maintenance with no mechanical seals or timing gears
- Easy to install
- Clean in place (CIP) and sterilize in place (SIP) for the ultimate in convenience and cleanliness
- Eccentric disc design allows for consistent flow and improved energy savings
- Seal-less design eliminates leakage
- Ability to strip and drain transfer piping/tubing
- Self-priming
- Strong suction and discharge pressure
- Flow rate up to 70 m³/h (308.2 gpm), 10 bar (145 psi)
- Low linear speed
- Precise dosing
- Accurate volume metering with high turn down
- Maintains consistent performance over time
- Effective with both high- and low-viscosity fluids
- Full drainability

Options:

- ISO PN 20 flanges / ANSI 150 flanges
- ISO PN 16 flanges
- Heating jacket

Mouvex Technology

Eccentric disc pumps consist of a cylinder and pumping element mounted on an eccentric shaft. As the eccentric shaft is rotated, the pumping element forms chambers within the cylinder, which increase in size at the intake port, drawing fluid into the pumping chamber. The fluid is transported to the discharge port where the pumping chamber size is decreased. This action squeezes the fluid out into the discharge piping.

Mouvex Principle

Mouvex® G-FLO Series Eccentric Disc Pump

Bellows

Multi-layer bellows ensures total product containment without magnetic drive

- Optional bellows monitoring available

Shaft

Large diameter single shaft mounted on roller bearings

Lubrication

Lubrication by food grade oil

- Oil change every 24,000 hours at <80°C (<176°F)

Convenience & Cleanliness

Fully drainable and cleanable design. Pumped product in contact with only four (4) components:

- Casing
- Disc and cylinder set
- Bellows
- Few static O-rings

NO bushings, NO mechanical seal, NO magnets
